

Brand Guidelines 2018

Helping organizations transform complex business processes, ideas and services—into high quality technical solutions.

LOGO

- Familiar bezier curves and overlapping lines represent technical difficulties that are smoothed over and easily resolved by working with ArchIT.
- Offset by soft gradients and contemporary san-serif typefaces, the identity as a whole feels familiar in the tech space.
- Yet, bright pops of color makes the brand stand out against it's competition.

TYPOGRAPHY

- [Work Sans](#) is a free Google Font, and is the primary working typeface for all ArchIT elements. Work Sans should be used for all body copy and functional text elements.
- [Museo Slab](#) is a slab-serif typeface that is to be used for headline treatment and decorative elements. It can be purchased for use and downloaded through Adobe.

COLOR PALETTE

- The base of the color palette is a combination of blue and teal, forming a serene gradient out of the two.
- Orange and yellow are the bold accent colors, which are to be used sparingly—but never with each other.
- Tan and grays balance out the otherwise bold palette.
- A 10% hue of each primary color can be used to create a tertiary palette if needed.

ICONOGRAPHY

- Icons should always be designed to have openings in the strokes and focal rings using pops of color.
- Using playful, but clear symbols, the iconography should never be difficult to comprehend.
- Line weight should depend on the surrounding content, and the color should always contrast to the background to ensure legibility.

STYLING

- The ArchIT swoosh may be used as a decorative graphic element by increasing it in size and cropping it in interesting ways.
- To enhance and uniform the photography, gradient overlays may be applied to any images.
- Although these styling suggestions may be implemented on any branded material, they should be used sparingly.

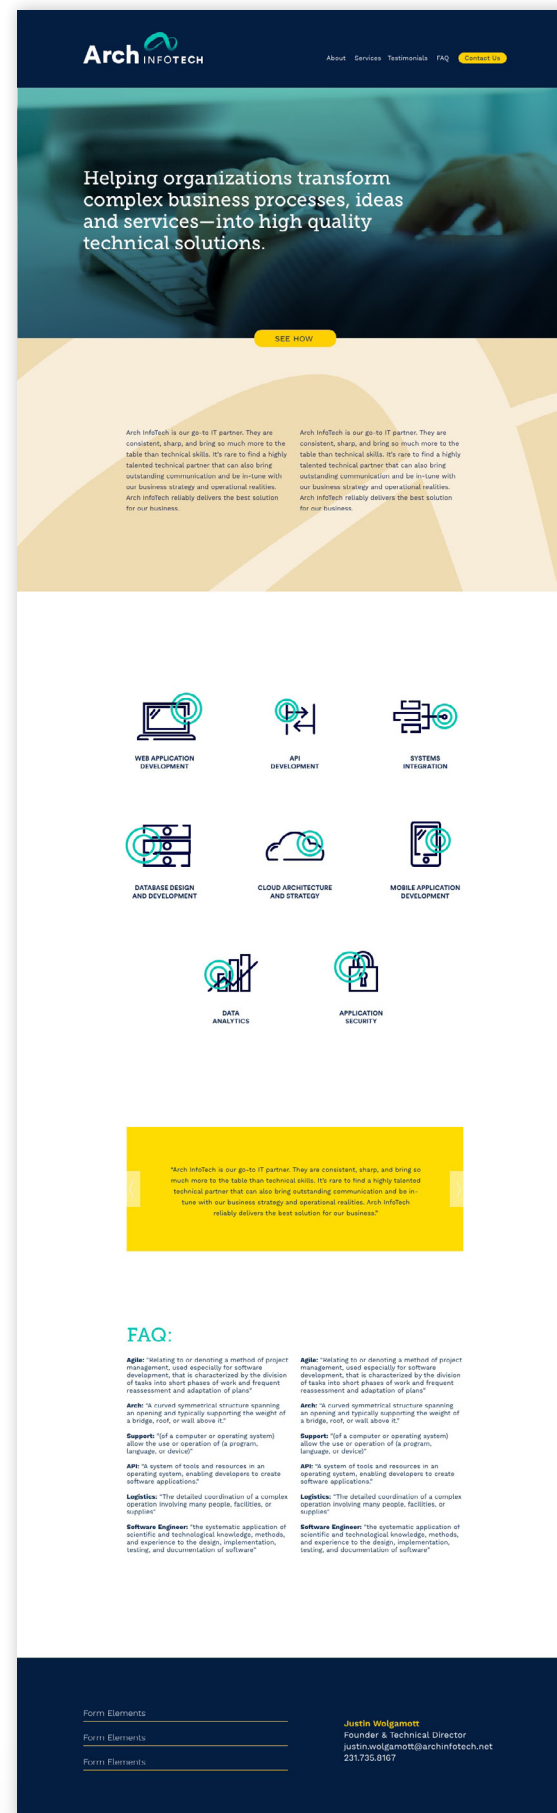

PHOTOGRAPHY

- Photography should always portray images of/or be reminiscent of people working with technology in a clean and professional environment.
- Images downloaded should be free of any photo filters.
- Sources for quality free, royalty-free images are:
 - Pixabay.com
 - Unsplash.com

FAQ SECTION

CONTACT US/FOOTER

WEBSITE

- The ArchIT site will be built from Squarespace template “[Horizon](#),” as it functions the best for a single page design.
- The website will be broken down into a few key sections, where all content is currently placeholder.
- FAQ will include key software engineering terms to drive SEO by providing free basic definitions to industry-related topics.

BUSINESS CARDS

- Business cards will be printed through [Moo.com](https://www.moo.com) on a Standard Sized card with a Soft Touch paper (at 19pt. thickness), using a Raised Spot Gloss finish to enhance the logo on the front.
- Two separate sets of card backs will be printed, one with and one without the Microsoft Certification.
